Secure Facility Job Site Considerations

When working a construction, demolition or renovation project at a secure facility it is important to consider whether or not subcontractors will meet the access requirements to your site. Secure installations such as airports, military bases, government offices and power plants are designed to protect people, equipment and sensitive information. The access control that goes along with that mission can impact projects within the secured area. Timeline set-backs, cost overruns and other problems can occur when subcontractors don't meet the criteria for entrance or violate the rules and regulations of the facility. Drivers without US citizenship, having criminal records or testing positive for drug use will usually not be allowed to enter. In other words, building materials don't arrive on time, job waste starts piling up, work stops and your customer starts complaining.

Make certain your waste removal company meets security clearance requirements-call Diamond Waste!

We meet secure installation access requirements. All Diamond Waste drivers are American citizens that have passed a criminal background check and are routinely screened for drug use. Our staff is experienced with security procedures and will work with your operation to ensure safe, timely and compliant removal of waste materials.

Don't forget we are veteran owned and operated.

Prompt waste removal is important to the success of your demolition, renovation or construction project-call Diamond Waste today!

US Military Increasingly Sets Environmental Sustainability Goals

Recent building trends show that US military bases and communities are increasingly setting long term environmental sustainability goals. Military base construction and demolition projects often times set the goal of achieving a green rating from the U.S Green Building Council's Leadership in Energy and Environmental Design (LEED) program.

Waste removal and recycling are an important part of meeting the USGBC's LEED certification standards.

Diamond Waste Services, Inc. is a LEED experienced waste removal company that can help construction, demolition and building renovation projects achieve USGBC LEED Materials & Resources Waste Management Plan Credits 2.1 and 2.2 for diverting waste material from disposal in landfills and incinerators.

The key word here is DIVERTING and this is done by recycling construction and demolition debris. At first glance this may seem like an added complication, however it is easier to implement than you may think.
